# Octobase Eco Plus

Cost effective, time-saving  
and better for the environment

Vivid colours that are so real they  
seem to be lifted straight from nature.

A water based mixing system that  
allows you to fine-tune quality, colour  
precision, speed and application yourself,  
with the increased coverage and  
efficiencies of the leading brands.

# Octobase Eco Plus

High quality water-based  
car refinishes

- ✓ 13 new mixing colours with excellent colour match
- ✓ Improved coverage and efficiency that equals the leading brands
- ✓ Cost and productivity gains per paint job
- ✓ Quality assurance
- ✓ Reduction in the number of coloured undercoats needed

## 13 new mixing colours with excellent colour match

As a business owner, you know how important colour is. Your customer does not want to see any difference in colour after a repair job and you want to be confident in your colour matching and the durability of your paint system. With the Octobase Eco Plus mixing colour system, you're assured of a problem-free full coverage colour solution every time. The Octobase Eco Plus System provides the full support of a global colour box containing all the standard colours and their variations, in addition to the easily accessible COINS colour retrieval system. Furthermore, Valspar provides global support via our colour laboratory group so you can rest assured that any colour questions you have will be answered.

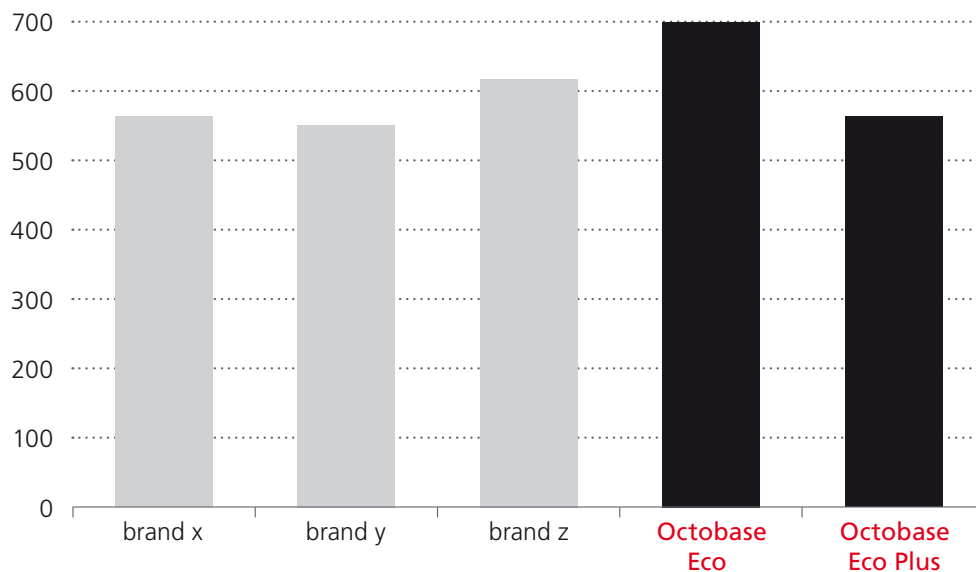

## Quality assurance

The quality of the Octobase Eco Plus System surpasses all expectations. The system is produced in accordance with strict ISO norms such as 9001 and 14001 and it satisfies all quality requirements for a modern car refinish system. The Octobase Eco Plus System consists of water-based products without any lead-containing pigments, manufactured under the best conditions and tested under the most extreme conditions. The quality is monitored by a team of specialists, so that you, as a business owner, are assured of a continuously stable product, a product with unique packaging that prevents the paint from drying out and, therefore, prevents any contamination of your expensive mixing colours.

## Improved coverage and efficiency that equals the leading brands

Various benchmark tests have shown that the coverage of the Octobase Eco Plus System meets and sometimes exceeds the leading waterbase refinish systems:

### Liquid grams needed to provide excellent coverage in a standard panel and hood application

Coverage in Grams (Standard job panel & hood)

With that increased coverage, comes more efficiency and production. That means more savings per job. In fact, with our Octobase Eco Plus System you can realize savings of up to 10% over the leading brands in a ready to spray comparison.

## Reducing numbers of coloured undercoats

With the introduction of the Octobase Eco Plus System the number of coloured undercoats can be reduced with at least 20%. In addition to this we will start with the introduction of grey shades as undercoat. With the introduction of grey shades the reduction of coloured undercoats can go up to 50%. Please read more detailed information in the leaflet.

## Step by step

To enable you to benefit from the Octobase Eco Plus System, Valspar is going to immediately start using the new mixing colours in all colour formulas to be newly developed. At the same time, the current formulas will be updated step by step. This will give you the time to use up your supply of the existing mixing colours. Updated formulas can still be displayed using the “Old version” button in COINS.

At Valspar, we are mindful of how we operate our facilities, work to protect employees, the public and the environment by minimizing emissions and waste and promoting recycling. We are also committed to making environmental improvements to our materials and processes, developing products that minimize environmental impact. The logo can be seen on all VOC compliant products.
