## New in the range TW81 Octobase Eco Thinner Slow

We have extended our range of water-borne products with a new thinner, the TW81 Octobase Eco Thinner Slow. This product has been added to the range because there is a need for a slower thinner, in particular, for warmer areas. Since Octoral products are sold globally, it is very important that people can work with our products under all temperatures and climate conditions. You can order the TW81 by specifying product number: **306104001**

## Valspar bv and safety

Valspar bv, Octoral manufacturer, has safety high on its priority list. A safety day is organised for all staff each year and, in addition, there are also frequent training sessions for staff. The number of incidents with serious injuries has been reduced by more than 60% in part due to this. Our results in the area of safety have also attracted the attention of other

companies. A delegation from Nedal Aluminium B.V. based in Utrecht (Nederland) has even visited Valspar bv within this framework. They were very impressed by our approach and the related results.

## New mixing colour W62

We have again added a new mixing colour to our range, the W62. This is a red lacquer that ensures that our red colour range is even more complete. In addition to the fact that this mixing colour is cleaner and brighter, its use gives a better coverage.

The product can be ordered in a 1 litre packaging. The formulation with the new W62 mixing colour will be included in the November COINS release.

## Octobase Eco system packaging lid

The dosing cap will no longer be supplied with our Octobase Eco system mixing colour packaging as from now. The dosing cap must be ordered as a separate product. You can order a box with 200 dosing caps by specifying product number **DK061**.

# Updates

The following additions/updates have been released since the start of August:

**COINS CD-Rom version 6.6 (\*)**

**Connex CD-ROM**

**Colour Box 7 (\*\*) Addition**

In August the updates registered for you were sent out with the current orders. If you do not have any current orders, we will be sending the updates separately. Should you not have received them by mid-September, please contact us.

## COINS(\*)

COINS update 6.6 has been released as from the beginning of August. We have added a few new items and also implemented improvements with regard to the previous version. Below we have included an overview of the most important changes:

- A ready for spraying option has been added. The user can indicate which product must be added to make the formula ready for spraying by using the + sign under the Calculate button. The user has the option to set up a default selection so that the ready for spraying products are added to a formula immediately when it is opened.
- The colorECSpert software has an auto detection option for the X-rite MA60 spectrophotometer.
- The colorECSpert menu has its own submenu.

## Colour Box(\*\*)

It is necessary to expand the number of colour fans with 5 as a result of Colour Box update 7. The Chrysler and Ford makes will both now have 3 fans instead of 2.

In addition, 3 new fans will be added for the following makes:

- Aston Martin, Bentley and Rolls Royce (3 makes in 1 fan)
- Ferrari, Lamborghini, Lotus and Maserati (4 makes in 1 fan)
- Porsche

As you know, COINS refers to the correct fan number for every colour included in the Colour Box. Everybody must transfer the same colour chips to ensure that these references are also correct after the new fans are put into service. You will also receive an instruction sheet for transferring the colour chips and for adding the new fans using Colour Box update 7 as well as the 5 new fans (provided with labels with the new division). The photo shows an example of the instruction sheet.
