DISCOVER EFFORTLESS ACCURACY

ACHIEVE A SEAMLESS AND STRIKING RED EFFECT COLOUR

Octoral's forward-thinking approach means we are always at the forefront of colour innovation, developing solutions in line with OEM colours and special effects to make sure you can produce premium refinishes, no matter how complex. **Metallic Bright Red** is an enhanced toner that has been introduced to the Octobase System for even better colour precision when mixing challenging bright red colours with candy effects.

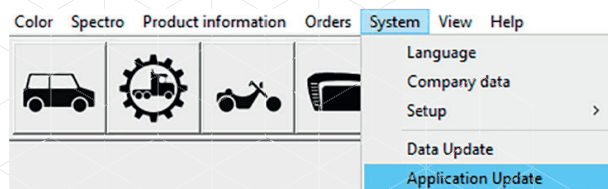

STRAIGHTFORWARD APPLICATION

The Metallic Bright Red is easy to use with a straightforward application process to achieve an outstanding finish. It is a mixing toner that can be used with any toner in the Octobase System, use it with metallics or xirallc colours in a two stage applications process or a three stage process with effect and candy colours to achieve a bright end result to match most OEM red finishes.

The introduction of the B298 Metallic Bright Red will result in the rationalisation of the current Metallic Bright Red toner (B816).

HOW TO ACCESS THE METALLIC BRIGHT RED

Please ensure that your COINS software is up to date. The new colour formulations with the new Metallic Bright Red toner are available on the latest update. To update your COINS software, follow the instruction below.
