

OCTORAL

DISCOVER PERFECT ORIENTATION

OCTORAL DISORIENT ADDITIVE

MATCH SPECIAL EFFECTS SEAMLESSLY AND EFFICIENTLY

Octoral's advanced refinishing solutions have been supplemented by a powerful Disorient Additive, which extends the range of Octobase Eco Plus toners. This innovation makes OEM metallic and pearlescent effects easier to match, while making the refinishing process more efficient, and your business more profitable.

ADVANCED TECHNOLOGY

Octoral Disorient Additive has been formulated to create the perfect orientation and angle variation of the reflective particles. This innovative technology produces a high-quality result that replicates the finish achieved through OEM electrostatic spraying.

CONCENTRATED POWER

With double the efficiency of our current Octoral Flop Additive, only half as much Octoral Disorient Additive is needed to produce the required effect. The more concentrated Disorient Additive means the paint mix is less transparent, which also increases hiding power. The result is faster refinishing and less material consumption, resulting in significant efficiencies throughout the process.

OPTIMAL COLOUR MATCHING

This technologically advanced Octoral Disorient Additive expands Octoral's already impressive and innovative refinishing system. Precise matching of colour and effect is now possible over an even wider range of specialist colours, ensuring total customer satisfaction every time.

OEM COMPATIBILITY

Octoral Disorient Additive offers the ideal solution for the majority of effect colours from a variety of vehicle manufacturers, including: BMW, Chrysler, Ford, Ford USA, General Motors, Honda, Mazda, Mercedes, Mitsubishi, Toyota and Volkswagen.

HOW TO SELECT OCTORAL DISORIENT ADDITIVE IN COINS

Our innovative COINS software has been updated to include the new Disorient Additive. Please ensure you are using version 15.0 or later.

COINS will default to the existing Octoral Flop Additive, so please follow the instructions below to access the formulas containing the new Octoral Disorient Additive and set this product as the default value. It is also possible to return to the existing product formula, if required.

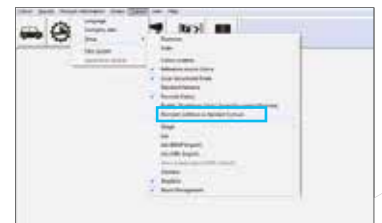

To access the new Octoral Disorient Additive formula

- In the formula dialogue, select the checkbox 'Disorient Additive', this will then update the formulation to use the new product

Setting Octoral Disorient Additive as default

- Select Menu, then System, then Setup
- Next select 'Disorient Additive as standard recipe', COINS will now use Disorient Additive for all applicable formulations

If there is a requirement to use the previous formula, simply deselect Octoral Disorient Additive as follows:

- Go to the relevant formula
- Use the formula dialogue box and deselect the 'Disorient Additive' checkbox

OCTOBASE ECO PLUS

519091001 - 1L
W909 Octobase Eco Plus
Disorient Additive
per box - 3

With the addition of Disorient Additive to the Octoral system, you can now match metallic and pearlescent effects seamlessly and efficiently.
